Independent consulting · delivery, transformation & service performance

Make the promise deliverable.

Delivery, transformation and managed services advisor for IT services firms, GCCs and enterprise leaders.

When a program is drifting, a service model is unbuilt, an account is under pressure or AI needs to become real work, I help leaders connect the decisions, numbers, teams and operating rhythm that determine the outcome.

Request a 30-minute call ->

Start with a delivery health check down

Rishi Salunkhe · Pune, India

Leaders call me when the status report no longer matches the reality of delivery.

21+ years

Consulting, delivery & transformation

From pursuit to run

Commercial shaping, programs & service operations

Global delivery

India, Australia, New Zealand, UK & Philippines

Experience behind the practice

Built across demanding customer environments.

Organisations I have worked within or delivered for during prior roles, across telecom, technology and enterprise operations.

These marks describe prior employment or customer work and do not imply endorsement of this independent practice. Globe logo source and licence ->

Organisations shown: Infosys, Tech Mahindra, Cleverex, British Telecom, Openreach, Vodafone Hutchison Australia, TPG Telecom, Optus, Nokia, Aspire Systems, Globe Telecom, PiES, Spark New Zealand, Rakuten, Energy Advance Australia.

Who I work with

Built for leaders who carry the delivery promise.

Most difficult delivery problems sit between functions: sales promised one thing, the plan says another, and operations inherits both. That gap is where I work.

Founders and delivery heads

You are winning work faster than your delivery model can absorb it. Margins are unclear, escalations reach you late, and every bid starts from a blank page.

GCCs & enterprise IT

Centre leaders and CIO teams

You are scaling an India capability centre, moving work from vendors, or trying to make PMO reporting something leadership can act on.

Transformation sponsors

Executives with a program at risk

A critical program keeps moving its dates. You need an independent view of what is true, followed by practical recovery ownership.

Why this practice exists

The gap between a sound idea and a working operation is a leadership problem.

Companies do not experience process, technology, service, finance and people as separate workstreams. A customer experiences the whole system. I bring 21+ years across those seams - from process redesign and commercial shaping to program recovery, managed services, AI delivery and executive governance.

I can enter for a specific problem, build a missing capability or take accountability through a critical period. The work begins with evidence and ends with an operating rhythm your team can sustain.

"If the plan, the service promise and the commercial model disagree, the status report will eventually tell you."

Signature engagements

What leaders call me in to solve.

Each offer has a defined entry problem and a concrete output. The mandate can be diagnostic, build-and-embed, or hands-on leadership.

01 /

Red-to-Ready Turnaround

A program is slipping, trust is low and leaders need a fact-based recovery path.

Restore control to

02 /

The Delivery Office

Build a PMO/PGO that exposes risk, connects decisions and raises delivery maturity across an account or portfolio.

Build the management system to

03 /

Managed Services Builder

Turn a service ambition into an offer that sales can position, operations can run and customers can trust.

Design the business to

04 /

Process-to-Platform

Redesign fragmented work before digitising it, then govern change across people, systems and adoption.

Remove the friction to

05 /

Commercial Command

Connect effort, staffing, scope, SLAs, pricing and P&L so account growth does not outrun delivery economics.

Find the margin truth to

Ways I work with leadership

An independent view. Then a practical hand on the wheel.

Diagnose

Independent review of delivery, service, process or commercial health; decisions and priorities made explicit.

Design

Operating models, governance functions, managed services propositions and process changes built for use.

Lead

Interim program, account or transformation leadership when critical work needs experienced ownership.

Enable

Coaching, playbooks and role-based AI or delivery workshops that build capability inside the team.

A few proof points

Experience that crossed from the boardroom to the working team.

Program recovery

Red to controlled

Reset scope, dependencies and execution for a distressed billing transformation in Australia.

Operational transformation

~65% to ~95%

Reported SLA compliance after redesign and automation of a high-volume energy compliance workflow.

Practice creation

Standardised

Managed services framework adopted for pursuits and proposals after a six-month capability build.

These examples are from previous employed or client delivery roles. Outcomes are specific to those engagements.

Engagements

The consulting portfolio

Bring the difficult brief.

Some mandates need a sharp independent diagnosis. Others need a capability built, a transition led or a delivery leader in the room. These engagements connect strategy, operating design, commercials and execution around the outcome at stake.

Choose the first problem to solve

01 / Delivery & recovery

Is the plan still credible?

Start with the Delivery Health Check, then decide whether recovery leadership or a stronger delivery office is needed.

Start here ->

02 / Managed Services & ITSM

Can the service promise be run?

Examine the offer, transition, operating model, SLA, cost to serve and governance before scaling it.

Explore this area ->

03 / Commercial & AI

Will the investment create value?

Connect bids, account economics and AI use cases to the teams, controls and measures that make them real.

Explore this area ->

Where most clients start

The Delivery Health Check

A fixed-scope, two-week independent review of one program, account or delivery unit. You get a clear reading of where it stands, what puts it at risk, and which decisions will restore control.

Request a Health Check ->

See the recovery mandate down

Length

Two weeks, remote or on site as agreed

Your time

A kickoff, approximately 6-10 stakeholder conversations where available, and one executive readout

Fee

Fixed fee quoted after the scoping call

You receive

- A RAG view of scope, schedule, commercials, people and service
- A risk and dependency map with named owners
- Recovery options and their trade-offs
- A 30-60-90 day action plan and executive readout

Turnaround

Delivery office

Managed services

Process and platform

Commercial

AI

Specialist applications

Core mandates

Six engagements built from lived delivery experience.

Each can be scoped as a diagnostic, design-and-build assignment or hands-on leadership mandate. The exact work is agreed against the client's situation.

01 / Core mandate

Red-to-Ready Turnaround Featured

A program is slipping. The reported status and the lived reality no longer match. The first task is to establish the truth, then earn back control.

When to call

Repeated date changes, unresolved dependencies, customer escalations, unclear success criteria or a program that everyone knows is red but nobody can reset.

What I do

- Review plan, scope, contracts, dependencies, risks and evidence of progress.
- Interview sponsors, customers, delivery teams and critical suppliers.
- Separate immediate stabilisation from structural recovery.
- Reset ownership, decision rights, critical path and escalation cadence.
- Lead the restart or assure the team executing it.

What you receive

A candid situation assessment, recovery options, a credible integrated plan, decision log, executive cadence and measurable exit criteria.

Basis: led recovery of a distressed Australian billing transformation; extensive executive escalation and account governance experience.

Relevant career example ->

02 / Core mandate

The Delivery Office

Build a PMO or PGO that lets leaders see where outcomes are at risk and equips teams to act - across projects, services and commercial commitments.

When to call

Portfolio reports disagree, escalation comes late, projects use different rules, resources are stretched or governance is viewed as overhead.

What I do

- Assess delivery maturity, decision latency and current reporting quality.
- Set the charter, service catalogue, RACI and governance levels.
- Design assurance checkpoints, portfolio measures and risk triggers.
- Establish SteerCo, QBR and operational review rhythm.
- Coach the team and embed a usable handover.

What you receive

A working PMO/PGO operating model, templates, dashboards, decision pathways, resource view and the first cycle of leadership reviews.

Basis: headed a PGO in a ~550-FTE managed services program; led PMO/SLA functions and fintech governance assessment.

Relevant career example ->

03 / Core mandate

Managed Services Builder Featured

Turn "we should sell managed services" into a service business with a clear offer, transition path, performance promise and delivery economics.

When to call

Sales has demand but operations lacks a repeatable model; SLAs are proposed before cost and capability are understood; every bid starts from scratch.

What I do

- Define the service catalogue, scope boundaries and target customers.
- Build the operating model, roles, governance and ITIL-aligned practices.
- Design SLA/KPI measures, reporting and service reviews.
- Shape transition, stabilisation and steady-state lifecycle.
- Develop staffing, effort, pricing and proposal assets.

What you receive

A sellable and operable managed services blueprint, transition toolkit, commercial assumptions and reusable pursuit collateral.

Basis: led a six-month managed services practice build later adopted for pursuits; governed large service accounts.

Relevant career example ->

04 / Core mandate

Process-to-Platform

Fix the work before automating it. Connect the customer journey, operating process, system handoffs and measures into one transformation path.

When to call

Manual effort keeps growing, teams blame one another for handoffs, a digital project reproduces old inefficiency or the platform is live without adoption.

What I do

- Map current-state flows, ownership and customer friction.
- Identify rework, control gaps, automation points and data handoffs.
- Design future-state process, roles and service measures.
- Translate the change into delivery increments and acceptance criteria.
- Govern UAT, rollout and operational adoption.

What you receive

A process and system change roadmap, prioritised business case, future-state model, integration dependencies and adoption measures.

Basis: telecom lead-to-cash and trouble-to-resolve redesign; energy workflow automation across ~150 jobs per day.

Relevant career example ->

05 / Core mandate

Commercial Command

Bring delivery and P&L into the same conversation. Make the cost to serve, staffing model, service promise and account opportunity visible together.

When to call

Revenue is growing but margin is unclear, utilization looks healthy while delivery struggles, scope changes go unpriced or a bid cannot be delivered at its proposed cost.

What I do

- Review budget, actuals, forecast, effort and resource assumptions.
- Examine scope, SLA obligations and commercial leakage points.
- Model pricing and staffing options for pursuits or renewals.
- Connect account health, delivery risk and growth pipeline.
- Build a review cadence with decision owners.

What you receive

A transparent commercial baseline, decision options, risk register, account action plan and repeatable financial review rhythm.

Basis: portfolio P&L and account ownership, RFP solution shaping, pricing and managed services resource models.

Relevant career example ->

06 / Core mandate

AI That Works Featured

Choose the right work for AI, deliver the pilot with real controls, then teach the teams who must use and judge its outputs.

When to call

Ideas are plentiful but value is vague; a demo is impressive but untested; teams need practical AI fluency; leaders need an accountable pilot.

What I do

- Discover and prioritise use cases by effort, value and risk.
- Map source data, workflow, human review and success measures.
- Lead delivery across product, technology, business and UAT.
- Test source grounding, confidence and failure scenarios.
- Run role-based workshops using the team's own work examples.

What you receive

A prioritised use-case portfolio, pilot charter, validation and adoption plan, or a tailored AI learning experience.

Basis: led a production knowledge assistant across a large document corpus and practical AI/automation delivery. Training is offered as a tailored new service.

Relevant career example ->

AI enablement formats

Useful work, taught through real work.

These are tailored formats for teams that need to move beyond tool demonstrations. We agree the use cases, data boundaries and success measures before the session or sprint.

Corporate AI Enablement Workshops

Half-day or full-day sessions built around the tools and workflows your people actually use. Practical prompts, judgment checks and department-specific exercises.

In person

Remote

Tailored

Team Workflow Optimisation Sprint

Focus on one team's work: baseline effort and rework, find useful AI entry points, map human review, and define a measurable pilot.

One team

Workflow

Pilot

Role-based AI Implementation Sessions

Separate learning paths for delivery leaders, PMO, HR, finance and operations, each tied to decisions and tasks in their daily work.

Role specific

Discuss an AI enablement brief ->

Adjacent mandates

More ways to put this foundation to work.

These applications extend proven delivery, transition, governance and commercial experience into new client situations. Each mandate is scoped around the people and specialist skills it needs.

Bid to Run

Deal Delivery Assurance

Review a proposed solution before commitment: scope, assumptions, staffing, transition, SLA feasibility, risk and delivery economics.

Built on RFP leadership, pricing, P&L and end-to-end delivery.

Interim leadership

Fractional Head of Delivery

Provide an executive delivery rhythm, account review, escalation ownership and coaching during a growth or leadership transition.

Built on customer delivery, portfolio and people leadership.

Service reliability

ITSM Reset

Examine incident, problem, change, SLA and service-review practices; redesign the points where operational performance and customer experience diverge.

Built on ITSM, ITIL, SLA/SLM and major service governance.

Capability centre

GCC Delivery Launch

Set up the delivery governance, transition readiness, operating measures and cross-location handoffs for a new or expanding India capability centre.

Built on large transitions, PMO/PGO setup and global client delivery; scope is tailored.

Transition

Vendor & CoE Transition Office

Coordinate people, knowledge, tooling, infrastructure and service acceptance when delivery moves between providers or a new centre is formed.

Built on a ~400-FTE Test CoE transition and service mobilisation work.

Field operations

Field Service Digitisation

Redesign scheduling, assignment, inspection, mobility and performance visibility for teams working across distributed physical assets.

Built on telecom generator and tower operations plus energy assessment platforms.

Executive decisions

Transformation Assurance

Give sponsors an independent view of whether a major transformation has credible scope, readiness, dependencies and measurable benefits.

Built on program recovery, delivery assurance and executive governance.

Learning

Delivery & AI Academy

Practical workshops for PMs, delivery leaders and business teams on escalation judgment, governance, ITSM and responsible everyday AI use.

Built on people leadership, mentoring and AI program experience; curriculum tailored to the audience.

Account growth

Customer Value Office

Link QBRs, service performance, roadmap, commercial commitments and new opportunities into one account leadership cadence.

Built on strategic customer ownership, account growth and commercial governance.

Ways to engage

Three ways to work together.

Scope, outputs and fees are agreed in writing before work begins. The form of engagement follows the decision and the level of ownership needed.

Diagnose

Independent diagnostic

Fixed scope · typically 2-3 weeks

- Delivery Health Check
- Deal Delivery Assurance
- AI use-case assessment

Design & build

Build and embed

Project scope · duration agreed together

- PMO/PGO or managed services setup
- ITSM reset or process redesign
- AI pilot and adoption

Lead

Interim leadership

Time-bound mandate · agreed cadence

- Program recovery lead

- Fractional Head of Delivery
- Transition office lead

Working together

Practical answers before we begin.

How long does an engagement take?

The Delivery Health Check is designed around two weeks when documents and stakeholders are available. A practice build, transition or interim leadership mandate is scoped against the work and decision cycle.

Remote or on-site?

Both. I am based in Pune and have worked with distributed teams and customers across markets. Workshops, critical reviews and transitions may benefit from time on site; we agree the model and travel in the scope.

How is confidential information handled?

We agree confidentiality, access, data handling, deliverables and ownership in writing before sensitive material is shared. A first call can stay at the problem and context level.

Will you work with our own team?

Yes. The work is designed around the sponsor, delivery and operational owners who will carry it forward. Decision rights, specialist contributions and handover are explicit in the engagement.

How are fees set?

A fixed diagnostic can be quoted after a short scoping conversation. Longer mandates depend on duration, travel, access, deliverables and whether hands-on leadership is required. A written proposal sets out the fee and terms.

What happens in the first call?

In about 30 minutes, we discuss the decision you face, timing, the people involved and what evidence exists. I will say whether I can help and what a useful first step would look like.

One accountable advisory lead.

I lead diagnosis, operating design and delivery governance; the responsibilities of client teams and any specialist contributors are agreed in the mandate.

A useful first step

Start with the problem, not a package.

Tell me what is happening, what decision is stuck and what is at stake. We can define the smallest useful intervention.

Request a 30-minute call ->

/

Selected work

Evidence from prior roles

What the work looked like when it mattered.

Complexity varies. The common thread is making the problem visible, aligning decision makers and staying accountable through execution. These examples describe work led as an employee or delivery partner, not contracts won by this new practice.

Process redesign

Recovery

Managed services

Governance

AI

Automation

Commercial

Field operations

All work

Delivery & recovery

Managed services

Process

AI

Commercial

01 / Process consulting

Telecom · New Zealand

Redesigning the customer journey behind broadband delivery.

Lead-to-cash and trouble-to-resolve crossed customer acquisition, order management, fulfilment, provisioning and downstream operations. The challenge was not a single system; it was the sequence of work across business, operations and technology.

Role

Led consulting and cross-functional process redesign.

Work

Mapped the end-to-end flow, surfaced gaps and handoff dependencies, and aligned teams on the future operating process.

Relevance

Useful where customers experience delays that individual functions cannot solve on their own.

02 / Program recovery

Turning a red program into controlled delivery.

A real-time rating and billing migration had reached a distressed state. Progress depended on a credible scope, explicit dependencies and a delivery plan that teams and leaders could use to make decisions.

Role

Led the recovery and restart of a transformation valued at approximately US\$20 million.

Work

Reset scope and dependencies, re-established the plan and drove execution through the restart.

Outcome

Moved the program from a red state to controlled delivery, with schedule deviation kept limited. A precise variance was not recorded for publication.

03 / Practice build

Technology services · India

~6-month build

Building managed services as an actual operating capability.

A service firm needed more than a proposal label. The engagement brought Geo, business-unit and domain leaders together to define what the offer was, how it would be transitioned, how performance would be governed and how it would be priced and resourced.

Role

Led the six-month consulting engagement.

Work

Developed the service catalogue, operating model, SLA/KPI governance, transition approach, pricing and resource models, and proposal toolkit.

Outcome

The framework became a standard pursuit approach; the reported bid pace moved from roughly 1-2 to around 10 managed services opportunities a year.

04 / PGO and transition

Telecom · Australia and Philippines

Governance for large operations and high-stakes transitions.

For an Australian managed services engagement of around 550 FTE, I led the Project Governance Office across managed services and projects, connecting performance, commercials, executive reviews and transformation work. In the Philippines, I led PM and governance for a roughly 400-FTE Test CoE transition from an incumbent provider.

Scope

Account governance, service reviews, infrastructure readiness, staffing mobilisation and go-live coordination.

Outcome

The Test CoE reached go-live in approximately four months; the governance team covered a complex mix of rebadged and newly hired staff.

Relevance

Large transitions succeed when people, operating processes, infrastructure and customer governance become ready together.

05 / AI delivery

Energy compliance · Australia

From document overload to a usable knowledge assistant.

Assessors needed reliable access to information across a large body of plans, policies and regulatory documents. I led delivery of a production GenAI knowledge assistant designed for contextual questions with source references and confidence scoring.

Scale

Approximately 80,000 source files in the broader knowledge corpus.

Role

End-to-end delivery leadership, including stakeholder alignment, UAT and validation.

Control

Accuracy and hallucination risk were explicit considerations in testing and acceptance.

06 / Process automation

Energy compliance · Australia

Reworking a high-volume certification operation.

Manual email intake and allocation made work difficult to track and scale. The new flow used OCR-assisted document processing, automated job creation, skill-based assignment and customer communications.

Scale

Approximately 150 certification jobs per day.

Outcome

Reported SLA compliance rose from about 65% to about 95% for the operation.

Relevance

The gain came from redesigning the workflow and its ownership, then implementing automation around it.

07 / Commercial and account leadership

Telecom and enterprise technology

Connecting account growth to dependable execution.

Commercial work has been part of my delivery responsibility: pursuit workshops, solution shaping, estimation, staffing, pricing, P&L review, executive customer relationships and growth. On an Australian telecom account, the engagement grew from one platform to four concurrent programs.

Role

Account delivery and commercial ownership in prior roles.

Work

RFP support, solution and cost modelling, delivery reviews, customer escalation and account planning.

Principle

Growth is durable when the service promise, staffing model and delivery controls agree.

Making a distributed asset operation visible.

Generator tracking across a national telecommunications estate relied on spreadsheets. I led delivery of a portal to improve visibility, utilisation and operational decisions across an estate of roughly 50,000 tower sites and 3,000 generators.

Role

End-to-end project leadership for the generator management portal.

Scale

Approximately US\$800,000 project; three follow-on projects worth around US\$500,000 combined.

Outcome

The program reported roughly 30-35% cost optimisation in the targeted operation. This is a historical engagement figure, not a forecast for another client.

Client and employer relationships remain with the organisations involved. Figures are rounded and refer to specific historical engagements; results depend on each client's context.

Your situation

What would useful progress look like?

Tell me where the program or service stands today. We can identify the evidence and decisions needed for the next step.

About

Hrishikesh (Rishi) Salunkhe

Senior judgment. Practical ownership.

I work at the intersection of business process, technology delivery, service operations and commercial accountability. My approach is to make ambiguity discussable, decisions explicit and execution visible.

The perspective

Experience across the full promise-to-delivery chain.

Over 21 years, I have worked in process consulting, PMO and PGO leadership, service management, managed services, large transformations, customer delivery and commercial roles. That combination matters because the root cause of a delivery problem is often outside the project plan: a process handoff, a service promise, a resource assumption or a decision nobody owns.

My career has included Infosys, Tech Mahindra and Cleverex Technology, with long-term assignments in Australia, New Zealand and the Philippines, as well as UK exposure. I have worked with operational teams and senior customer leaders across telecom, energy and sustainability, technology services and enterprise platforms.

I have led cross-functional programs through discovery, solution shaping, UAT, rollout and steady state. I have also governed large managed services estates, helped build a managed services practice, recovered a troubled transformation and delivered AI-enabled and automation products in production.

21+ years

Delivery and consulting experience

Bid to run

Commercial shaping through steady-state service

Recovery & scale

Distressed programs, transitions and governance

Global

India, Australia, NZ, Philippines and UK

The examples and experience on this site come from prior employment and customer work; they do not describe contracts or staff of this practice.

Career

21 years, three firms, one thread.

Each role added a layer: service data, then process and governance, then programs and P&L, then AI delivery and practice building.

2021 - present

Cleverex Technology · Customer Delivery & Engagement

End-to-end programs, account ownership, solution shaping and commercial management across energy, enterprise platforms, AI and workflow automation.

2011 - 2021

Tech Mahindra · Program & Delivery Leadership

Service management, process consulting, transitions, PMO/PGO, large account governance and program recovery across Australia, New Zealand and the Philippines.

2005 - 2011

Infosys · Team Lead

PMO and SLA reporting, performance management, process improvement and transition support in the BT account.

How I work

What you can expect from me.

01 / Candour

A clear view of the situation

I separate reported status from observable evidence and surface uncomfortable dependencies early enough to act.

02 / Partnership

Work with the people doing it

Good plans require business, technology, operations, suppliers and customer leaders to understand their part in the outcome.

03 / Ownership

Stay close to execution

Governance has value when it changes decisions and follow-through, not when it simply generates more reporting.

04 / Commercial sense

See the whole account

Scope, staffing, service levels, revenue and margin must be considered alongside schedule and quality.

05 / Pragmatism

Fit the intervention to the need

A two-week diagnostic, a capability build and interim program leadership need different depth and cadence.

06 / Transfer

Leave capability behind

The team should retain the roles, measures, templates and decision rhythm after an advisory mandate ends.

Ways to engage

Support shaped to the mandate.

Scope, outputs and availability are agreed before work begins. These are examples of formats, not fixed packages or guaranteed timelines.

01

Independent diagnostic

Review the evidence, speak with stakeholders, identify root causes and lay out the decisions and actions that matter most.

Useful for to delivery health, PMO maturity, process and service gaps

02

Build and embed

Design the operating model, governance or managed services capability and work with teams as it starts to run.

Useful for to PMO/PGO setup, ITSM, service transition, AI adoption

03

Interim leadership

Provide hands-on program, delivery or governance leadership during recovery, transition or a critical period of growth.

Useful for to high-stakes programs, escalations and account stabilisation

Qualifications and domains

A broad foundation, applied with care.

Education and certifications

- General Management Program (Executive), IIM Bangalore
- Bachelor's degree, Shivaji University
- ITIL V3 Foundation
- eTOM
- Six Sigma Yellow Belt
- Certified Scrum Product Owner (CSPO)
- UiPath (RPA)

Domain and technology exposure

- Telecom OSS/BSS, fulfilment, assurance and billing
- Energy, sustainability and field service operations
- Enterprise platforms and system integration
- ITSM, managed services and service governance
- AI/GenAI knowledge assistants, workflow automation and RPA
- Agile, Waterfall and hybrid delivery environments

Available for selected mandates, with scope, timing and delivery model agreed for each enquiry.

Work together

Bring the difficult brief.

Tell me the challenge, where it sits in the organisation and what decision you need to make. I'll respond with a practical next step.

A Rishi guide

the Jargon

Understand the ideas. Make better decisions.

Guide

AI Without the Jargon

A plain-language guide for people starting their careers and professionals who want to understand AI, LLMs and agents without needing to write code. It builds the judgment to ask better questions of AI tools and their outputs.

Explore the guide ->

01 / Delivery leadership

When the status is green and the customer is worried.

A green report can be true about activity and wrong about the outcome.

In a troubled program, I start by asking for evidence of the next few decisions: which milestone depends on an unready system, where the acceptance criteria are ambiguous, who can resolve a cross-team blocker, and whether the schedule has room for what testing is finding. The plan is only credible if those answers connect.

Three views are useful. First, the critical path as the delivery teams actually see it. Second, the customer's experience of progress, including promises made outside the formal plan. Third, the commercial position: scope changes, staffing and the cost of delay. When these views disagree, a better dashboard alone will not restore trust.

A recovery starts with a short, candid diagnosis. Make the unresolved decisions visible, name owners, set a near-term control rhythm and distinguish a new forecast from an aspiration. Sponsors can then decide what to protect, change or stop. That is how a red program earns a believable route back to control.

See the Delivery Health Check ->

Before funding the AI pilot, define the work it will change.

A compelling demo is a starting point. It does not tell you whether the operation is ready to rely on it.

Begin with the task. Who does it today, how often, where do they spend time, and what mistakes matter? Then decide what the AI is allowed to do: find information, draft an answer, recommend an action, or perform a step. Each level needs different controls and human review.

For a knowledge assistant, test against real questions from the users. Include outdated documents, conflicting policies, missing information and cases where the safest answer is "I don't know." Ask for source references, a clear escalation path and measures of answer quality as well as time saved. A pilot should expose failure modes before rollout.

Finally, make adoption part of delivery. The team needs to know when to trust, check or reject an output. The sponsor needs a business measure and an owner for the service after launch. Without those, the pilot may be successful as a demonstration and unsuccessful as a way of working.

ITSM, ITIL or SLA redesign

Process consulting or re-engineering

Commercial, P&L or deal assurance

AI delivery or AI training

Interim or fractional leadership

Something else

When does this need to move?

Now: it is already urgent

In the next 1-3 months

Later this year

Exploring for now

Where does it stand today?

Prepare my email ->

Your brief is ready.

Open it in your email app or copy the text and send it to Rishi.
